YEPO

AI marketplace — Africans access global AI services with local payment

Execution starts 1 January 2027 · 2026 is a preparation year outside the agenda · All amounts in FBU

1. What we expect from this product

Yepo is expected to be the AI consumption layer of the continent: a simple interface between global AI models and local payment means, where Bitcoin settlement is entirely invisible to the end user. It converts a hard access problem (no international card) into a token balance in FBU.

- Remove the payment barrier to AI for individuals and SMEs.
- Aggregate demand, then verticalise into legal, accounting and agricultural agents.
- Move up the stack to owned GPU capacity through SIGHT COMPUTE.
- 5M users, 80k SMEs and 2,7 Mds FBU ARR by 2036.

2. Economic model

Revenue line	Mechanism	Target margin
Margin on requests	10% applied on each routed query, invisible to user	10% gross, 55% net of infra
Token float	Prepaid balances create working capital	n/a
Yepo Business	Team seats, shared prompt library, invoicing	70%
Vertical agents	Per-seat monthly for legal / accounting / agri copilots	75%
Compute resale	GPU hours resold from 2034	35%

3. Investment required

Phase	Window	Capital needed	Main use
Preparation	2026	18 M FBU	Router prototype, Afripay + Blink integration, pricing model
Launch	2027	90 M FBU	Wallet, OTP onboarding, dashboard, support
Scale	2028–2030	600 M FBU	Multi-provider routing, vertical agents, RAG infra
Compute	2031–2036	5 Mds FBU	GPU clusters, African-language fine-tunes

4. Feasibility assessment

Dimension	Assessment	Condition to satisfy
Technical	High — already documented and partly built	Deterministic FBU ↔ token pricing and reconciliation
Regulatory	High	Prepaid credits, not e-money custody; clear terms of use
Operational	Medium-high	Provider terms compliance, abuse prevention
Financial	Medium	Mobile-money withdrawal fee of 4% absorbed in pricing
Talent	Medium	Backend engineer with payment + AI routing experience

5. Technology & operating stack

- Web app + central API handling accounts, wallet and request routing.
- AI router selecting the cheapest capable model per request (PPQ and peers).
- Deposits via Afripay C2B (Lumicash, Ecocash, Bancobu e-Noti); 4% fee deducted before token credit.
- Settlement in Satoshis via Lightning (Blink), FX via Yadio — fully hidden from the user.
- Batching of recharges to avoid repeated mobile-money fees.

6. Key performance indicators

Metric	2027	2031	2036
Active users / month	10 000	500 000	5 000 000
SME accounts	200	8 000	80 000
Requests / month	300 000	18 M	180 M
Revenue	12 M FBU	500 M FBU	2,7 Mds FBU
Gross margin on requests	10%	12%	15%

7. Risks & mitigations

Risk	Impact	Mitigation
Provider terms change	Critical	Multi-provider router, no single dependency
Margin compression by model price wars	High	Move to vertical agents and owned compute
Token pricing drift vs. FX	High	Automatic re-indexation on Yadio, daily reconciliation
Abuse / prompt misuse	Medium	Rate limits, content policy, KYC

		above a threshold
Compute sovereignty	Medium	SIGHT COMPUTE roadmap from 2034

8. Ten-year trajectory

TODAY

Dimension	Detail
Users	Early users
Revenue	Small margins on AI credits
Features	Local payment for AI APIs
Market position	Niche but unique in BI
Risks	AI provider terms
Advantage	Payment localization
Stack	Provider APIs + My Satoshis billing
Team	4

1 YEAR

Dimension	Detail
Users	10k users + 200 SMEs
Revenue	12M FBU
Features	Yepo Business · Prompt library
Market position	AI access default for francophone Africa
Risks	Margin compression
Advantage	Distribution + billing
Stack	Multi-provider router
Team	15

5 YEARS

Dimension	Detail
Users	500k users, 8k SMEs
Revenue	500M FBU
Features	Verticalized AI agents (legal, accounting, ag) · Local LLM fine-tunes
Market position	African AI consumption platform
Risks	Foundation model price wars

Advantage	Local context + integrations
Stack	Orchestration layer · Vector + RAG infra
Team	120

10 YEARS

Dimension	Detail
Users	5M users, 80k SMEs
Revenue	2,7 Mds FBU
Features	Yepo Compute (GPUs) · African-language LLMs
Market position	AI infrastructure for the continent
Risks	Compute sovereignty
Advantage	GPU access + local talent
Stack	Owned GPU clusters via SIGHT COMPUTE
Team	420

MATURE

Dimension	Detail
Users	Default AI layer of the group
Revenue	Strategic infrastructure
Features	Agent marketplace · Industry copilots
Market position	Pan-African AI platform
Risks	Geopolitical compute access
Advantage	Owned compute + audience + payments
Stack	Vertically integrated
Team	Standalone subsidiary
